

# Health Check For Atlassian Tools

**During a Health Check, Clearvision will complete a full analysis of your current Atlassian implementation. We'll ensure your mission-critical Atlassian tools are being used in line with best practice and help you identify areas that can be improved.**

Exactly how your Health Check is carried out and how long it takes depends on your particular situation and requirements, but it will normally involve a mixture of on-site system analysis, off-site reporting and feedback from one of our accredited consultants.

In the on-site portion, we'll fully assess your Atlassian setup to evaluate its efficiency and effectiveness, focusing on areas we've agreed with you.

This information is then used to write a comprehensive report, which we deliver to you for feedback. Included within this will be Clearvision's expert recommendations and advice.

## What Now?

To learn more about Clearvision's Health Check for Atlassian tools, contact your account manager, email [sales@clearvision-cm.com](mailto:sales@clearvision-cm.com), or visit [www.clearvision-cm.com/atlassian/health-check](http://www.clearvision-cm.com/atlassian/health-check).

## Health Check Phases

Your Clearvision Health Check will consist of three main parts:

- 1 | Health Check and systems analysis
- 2 | Report writing and delivery
- 3 | Report feedback and amendments

We'll tailor the exact process to your needs, but the result is the same: your Atlassian deployment in tip-top condition.
